<input type="checkbox"/>	ATP safe attachments
<input type="checkbox"/>	ATP Safe Links

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: ATP Safe Attachments

ATP Safe Attachments provides zero-day protection to safeguard your messaging system, by checking email attachments for malicious content. It routes all messages and attachments that do not have a virus/malware signature to a special environment, and then uses machine learning and analysis techniques to detect malicious intent. If no suspicious activity is found, the message is forwarded to the mailbox.

Box 2: ATP anti-phishing

ATP anti-phishing protection detects attempts to impersonate your users and custom domains. It applies machine learning models and advanced impersonation-detection algorithms to avert phishing attacks.

ATP Safe Links provides time-of-click verification of URLs, for example, in emails messages and Office files. Protection is ongoing and applies across your messaging and Office environment. Links are scanned for each click: safe links remain accessible and malicious links are dynamically blocked.
