NEW QUESTION 3
- (Exam Topic 4)
You have a computer named Computer1 that runs Windows 10. Computer1 has the local users shown in the following table.

Name	Member of
User1	Administrators
User2	Event Log readers
User3	Device Owners
User4	Power Users
User5	Users

Which users can analyze the event logs on Computer1? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Users who can analyze security event logs:

- User1 only
- User1 and User2 only
- User1 and User2, and User3 only
- User1, User2, User3, and User4 only
- User1, User2, User3, User4, and User5

Users who can analyze system event logs:

- User1 only
- User1 and User2 only
- User1 and User2, and User3 only
- User1, User2, User3, and User4 only
- User1, User2, User3, User4, and User5

A. Mastered
B. Not Mastered

Answer: A

NEW QUESTION 4
- (Exam Topic 4)
You have three computers that run Windows 10 as shown in the following table.

Name	TPM version	Operating system
Computer1	*None*	Windows 10 Enterprise
Computer2	2.0	Windows 10 Pro
Computer3	1.2	Windows 10 Enterprise

All the computers have C and D volumes. The Require additional authentication at startup Group Policy settings is disabled on all the computers.
Which volumes can you encrypt by using BitLocker Drive Encryption (BitLocker)? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

You can encrypt volume C on:
- Computer1 only
- Computer2 only
- Computer3 only
- Computer1 and Computer3 only
- Computer2 and Computer3 only
- Computer1, Computer2 and Computer3

You can encrypt volume D on:
- Computer1 only
- Computer2 only
- Computer3 only
- Computer1 and Computer3 only
- Computer2 and Computer3 only
- Computer1, Computer2 and Computer3

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Volume C on = Computer 2 and 3 only Volume D on = C1, C2, C3
The "Require additional authentication at startup" setting is located in the Computer Configuration\ Administrative Templates\ Windows Components\ BitLocker Drive Encryption\ Operating System Drives path. If the policy is disabled and there is no TPM chip installed, operating system drives can not be encrypted using BitLocker. Additional data volumes can be protected using a password as a key protector for example.

NEW QUESTION 5
- (Exam Topic 4)
You have 100 computers that run Windows 10. The computers are joined to an Azure AD tenant and enrolled in Microsoft Intune. The computers are in remote locations and connected to public networks.
You need to recommend a solution for help desk administrators that meets the following requirements:
≫ Connect remotely to a user's computer to perform troubleshooting.
≫ Connect to a user's computer without disrupting the desktop of the computer.
≫ Remotely view services, performance counters, registry settings, and event logs.
Which tool should you include in the recommendation?

A. Quick Assist
B. Intune
C. Remote Assistance
D. Windows Admin Center
Answer: C

NEW QUESTION 6
- (Exam Topic 4)
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
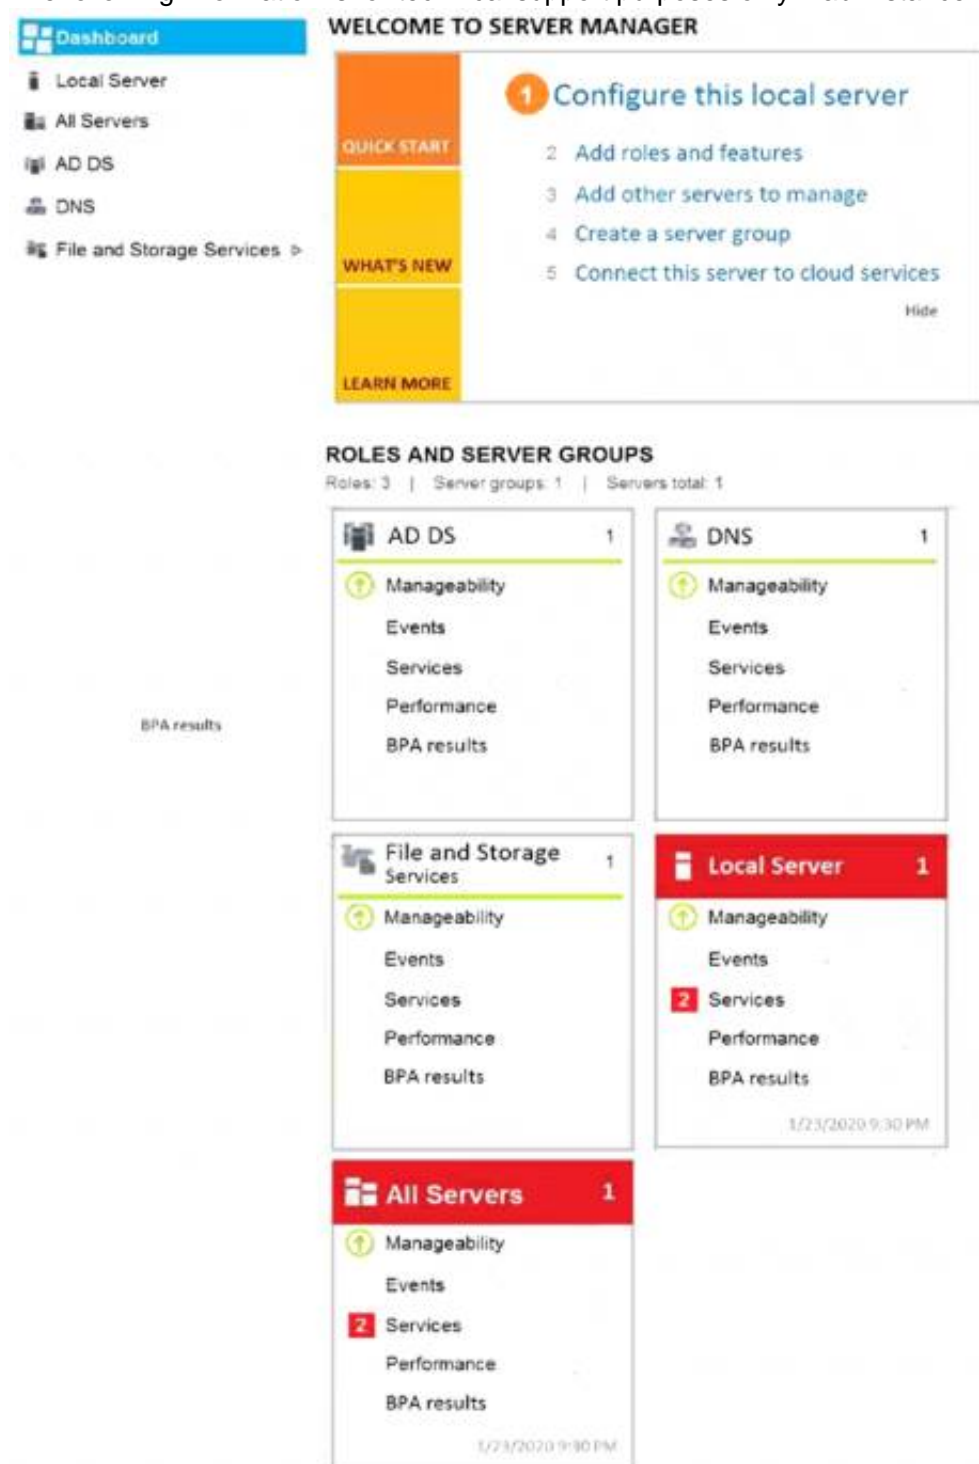

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may more than one lab that you must complete. You can use as much time as you would like to complete each lab.

But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

DC1

Users in the Finance group report that they cannot copy files to Client1\Finance. You need to resolve the issue.
To complete this task, sign in to the required computer or computers.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
> Open File Explorer.
> Browse and find the file or folder you want to have full access.
> Right-click it, and select Properties.
> Click the Security tab to access the NTFS permissions.
> Click the Advanced button.
> On the "Advanced Security Settings" page, you need to click the Change link, in the Owner's field.
> Click the Advanced button.
> On the "Select User or Group" page, click the Find Now button.
> From the search result, select your user account, and click OK.
> On the "Select User or Group" page, click OK.
> Click Apply.
> Click OK.
> Click OK again.
> Click OK one more time to complete this task.
It's important to note that if you're taking ownership of a folder, you can check the Replace ownership on subcontainers and object option in the Advanced Security Settings page to take control of the subfolders inside of the folder.
Now you'll need to grant full access control to your account, to do this use the following steps:
> Right-click the file or folder and select Properties.
> Click the Security tab to access the NTFS permissions.
> Click the Advanced button.
> Under the Permissions tab, click Add.
> Click Select a principal to add your user account.
> On the "Select User or Group" page, click the Find Now button.
> From the search result, select your user account, and click OK.
> On the "Select User or Group" page, click OK.
> On "Permission Entry", check the Full control option.
> Click OK.
> Click OK.
> Click Apply.
> Click OK.
> Click OK to close the file or folder properties to complete the task.
You can now assign the necessary permissions to the Finance group.
If you right-click on a file or folder, choose Properties and click on the Security tab, we can now try to edit some permissions. Go ahead and click the Edit button to get started.
At this point, there are a couple of things you can do. Firstly, you'll notice that the Allow column is probably greyed out and can't be edited. This is because of the inheritance I was talking about earlier. However, you can check items on the Deny column.
When you click the Add button, you have to type in the user name or group name into the box and then click on Check Names to make sure it's correct. If you don't remember the user or group name, click on the Advanced button and then just click Find Now. It will show you all the users and groups.
Click OK and the user or group will be added to the access control list. Now you can check the Allow column or Deny column.

DC1

A web service installed on Client1 is used for testing.
You discover that users cannot connect to the web service by using HTTP. You need to allow inbound HTTP connections to Client1.
To complete this task, sign in to the required computer or computers.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
To create an inbound port rule

➤ In the navigation pane, click Inbound Rules.

➤ Click Action, and then click New rule.

➤ On the Rule Type page of the New Inbound Rule Wizard, click Custom, and then click Next.

➤ On the Program page, click All programs, and then click Next.

➢ On the Protocol and Ports page, select the protocol type that you want to allow. To restrict the rule to a specified port number, you must select either TCP or UDP. Because this is an incoming rule, you typically configure only the local port number. TCP port 80. When you have configured the protocols and ports, click Next.

➢ On the Scope page, you can specify that the rule applies only to network traffic to or from the IP addresses entered on this page. Configure as appropriate for your design, and then click Next.

➢ On the Action page, select Allow the connection, and then click Next.

➢ On the Profile page, select the network location types to which this rule applies, and then click Next.

➢ On the Name page, type a name and description for your rule, and then click Finish.

NEW QUESTION 33

- (Exam Topic 4)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	Member of
User2	Domain Users
User3	Domain Admins
User4	Server Operators

You have a computer named Computer1 that runs Windows 10 and is in a workgroup.

A local standard user on Computer1 named User1 joins the computer to the domain and uses the credentials of User2 when prompted.

You need to ensure that you can rename Computer1 as Computer33. Solution: You use the credentials of User3 on Computer1.

Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:

Renaming a domain-joined computer will also rename the computer account in the domain. To do this, you need domain administrator privileges.

User3 is a domain administrator. References:

NEW QUESTION 41
- (Exam Topic 4)
You have a computer named Computer1 that runs Windows 10. Computer1 is in a workgroup. Computer1 contains the local users shown in the following table.

Name	Member of
Administrator	Administrators, Users
User1	Users
User2	Users

Computer1 contains the folders shown in the following table.

Name	Path
Folder1	D:\Folder1
Folder2	D:\Folder2
Folder3	E:\Folder3

The Users group has Full control permissions to Folder1, Folder2, and Folder3. User1 encrypts two files named File1.docx and File2.docx in Folder1 by using EFS.
Which users can move each file? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Users who can move File1.docx to Folder2:

| User1 only |
| User1 and Administrator only |
| User1, User2, and Administrator |

Users who can move File2.docx to Folder3:

| User1 only |
| User1 and Administrator only |
| User1, User2, and Administrator |

A. Mastered
B. Not Mastered

Answer: A

Explanation:
EFS works by encrypting a file with a bulk symmetric key. The symmetric key that is used to encrypt the file is then encrypted with a public key that is associated with the user who encrypted the file. Because the encryption & decryption operations are performed at a layer below NTFS, it is transparent to the user and all their applications.
Box 1: User1, User2, and Administrator Box 2: User1, User2, and Administrator
All three are members of the Users group that has Full control permissions to Folder1, Folder2, and Folder3.

NEW QUESTION 42
- (Exam Topic 4)
You have computers that run Windows 11 as shown in the following table.

Name	IP address	Joined to
Computer1	192.168.10.10	Active Directory
Computer2	192.168.10.15	Workgroup

You ping 192.168.10.15 from Computer! and discover that the request timed out. You need to ensure that you can successfully ping 192.168.10.15 from Computer 1.
Solution: On Computer2, you allow incoming ICMFV6 traffic in Windows Defender Firewall. Does this meet the goal?

A. Yes
B. No

Answer: A

NEW QUESTION 43
- (Exam Topic 4)
You have 100 computers that run Windows 10. You have no servers. All the computers are joined to Microsoft Azure Active Directory (Azure AD).
The computers have different update settings, and some computers are configured for manual updates. You need to configure Windows Update. The solution must meet the following requirements:
≫ The configuration must be managed from a central location.
≫ Internet traffic must be minimized.
≫ Costs must be minimized.
How should you configure Windows Update? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Windows Update technology to use:

| Windows Server Update Services (WSUS) |
| Microsoft System Center Configuration Manager |
| Windows Update for Business |

Manage the configuration by using:

| A Group Policy object (GPO) |
| Microsoft System Center Configuration Manager |
| Microsoft Intune |

Manage the traffic by using:

| Delivery Optimization |
| BranchCache |
| Peer cache |

NEW QUESTION 53
- (Exam Topic 4)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have two computers named Computer1 and Computer2 that run Windows 10.
You have an Azure Active Directory (Azure AD) user account named admin@contoso.com that is in the local Administrators group on each computer.
You sign in to Computer1 by using admin@contoso.com.
You need to ensure that you can use Event Viewer on Computer1 to connect to the event logs on Computer2. Solution: On Computer2, you run the Enable-PSRemoting cmdlet.
Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
The Enable-PSRemoting cmdlet configures the computer to receive PowerShell remote commands that are sent by using the WS-Management technology.

NEW QUESTION 59
- (Exam Topic 4)
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

Name	Member of
User2	Domain Users
User3	Domain Admins
User4	Server Operators

You have a computer named Computer1 that runs Windows 10 and is in a workgroup.
A local standard user on Computer1 named User1 joins the computer to the domain and uses the credentials of User2 when prompted.
You need to ensure that you can rename Computer1 as Computer33. Solution: You use the credentials of User1 on Computer1.
Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
Renaming a domain-joined computer will also rename the computer account in the domain. To do this, you need domain administrator privileges.
User1 is a standard user. References:

NEW QUESTION 108
- (Exam Topic 4)
Your network contains an Active Directory domain. The domain contains computers that run Windows 10. You must ensure that Windows BitLocker Drive Encryption is enabled on all client computers, even though a Trusted Platform Module (TPM) chip is installed in only some of them.
You need to accomplish this goal by using one Group Policy object (GPO). What should you do?

A. Enable the Allow enhanced PINs for startup policy setting, and select the Allow BitLocker without a compatible TPM check box
B. Enable the Enable use of BitLocker authentication requiring preboot keyboard input on slates policy setting, and select the Allow BitLocker without a compatible TPM check box
C. Enable the Require additional authentication at startup policy setting, and select the Allow BitLocker without a compatible TPM check box
D. Enable the Control use of BitLocker on removable drives policy setting, and select the Allow BitLockerwithout a compatible TPM check box

Answer: C

Explanation:
We need to allow Windows BitLocker Drive Encryption on all client computers (including client computers that do not have Trusted Platform Module (TPM) chip).
We can do this by enabling the option to allow BitLocker without a compatible TPM in the group policy. The "Allow BitLocker without a compatible TPM" option is a checkbox in the "Require additional authentication at startup" group policy setting. To access the "Allow BitLocker without a compatible TPM" checkbox, you need to first select Enabled on the "Require additional authentication at startup" policy setting.

NEW QUESTION 118
- (Exam Topic 4)
You have a computer named Computer1 that runs Windows10. Computer1 is in a workgroup. Computer1 contains the users shown in the following table.

Name	Member of
User1	Group1
User2	Group1
User3	Group1
User4	Users
Admin1	Administrators

You need to apply the same Group Policy settings to only User1, User2 and User3. The solution must use a minimum number of local Group Policy objects (GPOs).
How many local GPOs should you create?

A. 1
B. 2
C. 3

Answer: A

Explanation:
You can use security filtering to restrict the GPO to the required users. Only users with the Read and Apply Group Policy permissions will have the GPO applied to them.

User4	Server Operators

You have a computer named Computer1 that runs Windows 10 and is in a workgroup.
A local standard user on Computer1 named User1 joins the computer to the domain and uses the credentials of User2 when prompted.
You need to ensure that you can rename Computer1 as Computer33. Solution: You use the credentials of User2 on Computer1.
Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
Renaming a domain-joined computer will also rename the computer account in the domain. To do this, you need domain administrator privileges.
User2 is a domain user, not an administrator. Use User3's credentials instead. References:

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain. The domain contains a computer named Computer1 that runs Windows 8.1.

Computer1 has apps that are compatible with Windows 10.
You need to perform a Windows 10 in-place upgrade on Computer1.
Solution: You copy the Windows 10 installation media to a Microsoft Deployment Toolkit (MDT) deployment share. You create a task sequence, and then you run the MDT deployment wizard on Computer1.
Does this meet the goal?

NEW QUESTION 139
- (Exam Topic 4)
You have a workgroup computer named Computer1 that runs Windows 10 and has the users shown in the following table.

Name	Member of
User1	Administrators
User2	Users

You have a file named File1.reg that contains the following content.

```
Windows Registry Editor Version 5.00

[HKEY_CURRENT_USER\System\Key1]

[HKEY_LOCAL_MACHINE\System\Key2]
```

You need to identify what occurs when User1 and User2 double-click File1.reg.
What should you identify? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

When User1 double-clicks **File1.reg**:
- No change is made to registry.
- Only Key1 is added to the registry.
- Only Key2 is added to the registry.
- Key1 and Key2 are added to the registry.

When User2 double-clicks **File1.reg**:
- No change is made to registry.
- Only Key1 is added to the registry.
- Only Key2 is added to the registry.
- Key1 and Key2 are added to the registry.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1:
User1 is a member of the Administrators group so has permission to add keys to both registry hives. Box 2:
User2 is a standard user so does not have permission to add a key to the HKEY_LOCAL_MACHINE registry hive so Key2 will not be imported.

A user named User1 has a computer named Computer1 that runs Windows 10. Computer1 is joined to an Azure Active Directory (Azure AD) tenant named contoso.com. User1 joins Computer1 to contoso.com by using user1@contoso.com.
Computer1 contains a folder named Folder1. Folder1 is in drive C and is shared as Share1. Share1 has the permission shown in the following table.

Group	Share permission
Everyone	Full control
AzureAD\user1@contoso.com	Owner

A user named User2 has a computer named Computer2 that runs Windows 10. User2 joins Computer2 to contoso.com by using user2@contoso.com.
User2 attempts to access Share1 and receives the following error message: "The username or password is incorrect."
You need to ensure that User2 can connect to Share1.
Solution: In Azure AD, you create a group named Group1 that contains User1 and User2. You grant Group1 Change access to Share1.

NEW QUESTION 164
- (Exam Topic 4)
You have two workgroup computers named Computer1 and Computer2 that run Windows 10. The Guest account is enabled on both computers.
The computers contain the users shown in the following table.

Computer name	User name	User password
Computer1	User1	P@ssword1
Computer1	User2	P@ssword2
Computer2	User1	P@ssword1
Computer2	User2	P@ssword2
Computer2	User3	P@ssword3

The computers contain the shared folders shown in the following table.

Computer name	Shared folder name	Permission
Computer1	Share1	Everyone – Read
Computer2	Share2	Everyone – Read

Computer1 has password-protected sharing turned on. Computer2 has password-protected sharing turned off. For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
From Computer1, User1 can access Share2.	○	○
From Computer2, User2 can access Share1.	○	○
From Computer2, User3 can access Share1.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
When password protected sharing is turned on, only people who have a user account and password on your computer can access shared files.
Box 1: Yes

Password protected sharing is turned off on Computer2 so User1 can access Share2 from Computer1.
Box 2: Yes
Password protected sharing is turned on on Computer1. User2 has an account on Computer1 so User2 can access Share1 from Computer2.
Box 3: Yes
The answer to this question depends on which version of Windows 10 is running on the computers. This isn't specified in the question so it's likely that the question will be updated in future.
Password protected sharing is turned on on Computer1. User3 does not have an account on Computer1 so User3 cannot access Share1 from Computer2. However, the Guest account is enabled which could provide access depending on which version of Windows 10 is running. If it is Windows 10 Home or Pro, then the answer to this question is Yes. The Guest account does provide access. However, in later versions of Windows 10 Enterprise and Windows 10 Education (from build 1709 onwards), the Guest account does not enable access to the shared folder.

NEW QUESTION 173
- (Exam Topic 4)
You have four computers that run Windows 10. The computers are configured as shown in the following table.

Name	Member of
Computer1	Workgroup named WG1
Computer2	Workgroup named WG1
Computer3	Workgroup named WG2
Computer4	Active Directory domain named contoso.com

On Computer1, you create a user named User1. In the domain, you create a user named User2. You create the groups shown in the following table.

Name	Created on/in
Group3	Computer3
Group4	Computer4
Group5	Contoso.com

You need to identify to which computers User1 can sign in, and to which groups you can add User2.
What should you identify? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

User1 can sign in to: ▼

Computer1 only
Computer1 and Computer2 only
Computer1, Computer2, and Computer3 only
Computer1, Computer2, and Computer4 only
Computer1, Computer2, Computer3, and Computer4

You can add User2 to: ▼

Group5 only
Group4 and Group5 only
Group3, Group4, and Group5

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Computer 1 only.
User1's account was created on Computer1. The account is a local account on Computer1. Therefore, User1 can only sign in to Computer1.
Box 2: Group5 only.
User2's account was created in the domain. A domain is a security boundary. Therefore, you can only add User2 to groups in the domain.

Your company has an on-premises network that contains an Active Directory domain. The domain is synced to Microsoft Azure Active Directory (Azure AD). All computers in the domain run Windows 10 Enterprise.
You have a computer named Computer1 that has a folder named C:\Folder1. You want to use File History to protect C:\Folder1.
Solution: You enable File History on Computer1. You then enable archiving for Folder1.
Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
File History only backs up copies of files that are in Libraries, and Desktop folders and the OneDrive files available offline on your PC. If you have files or folders elsewhere that you want backed up, you can add them to one of these folders.

Answer: C

NEW QUESTION 194
- (Exam Topic 4)
Your network contains an Active Directory domain. The domain contains three computers named Computer1, Computer2, and Computer3 that run Windows 10.
The computers are on the same network and have network connectivity.
Windows Defender Firewall on Computer1 has the server-to-server connection security rule shown in the following table.

Name	Endpoint 1	Endpoint 2	Authentication mode
Rule1	Any	Any	Require inbound and request outbound

Windows Defender Firewall on Computer2 has the server-to-server connection security rule shown in the following table.

Name	Endpoint 1	Endpoint 2	Authentication mode
Rule1	Any	Any	Do not authenticate

Windows Defender Firewall on Computer3 has the server-to-server connection security rule shown in the following table.

Name	Endpoint 1	Endpoint 2	Authentication mode
Rule1	Any	Any	Require inbound and request outbound

All the connection security rules are enabled and configured to use only the Computer (Kerberos VS) authentication method.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
If Computer1 initiates communication to Computer2, network traffic will be encrypted.	○	○
Computer2 can establish communications to Computer3.	○	○
If Computer3 initiates communication to Computer1, network traffic will be encrypted.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
NO NO NO
Traffic will not be encrypted by default. The question does not have this option configured by default. Encryption is optional, not default to authentications.
Encryption needs to be enabled in the GPO. The default is data integrity which is not default to encrypt. Actually, if you encrypt you will use both integrity with encryption. Devices in the encryption zone require authentication to communicate with other devices.

NEW QUESTION 282
- (Exam Topic 4)
Your network contains an Active Directory domain that contains the objects shown in the following table.

Name	Type	Member of
User1	User	Group1
User2	User	Group2
Group1	Global group	*None*
Group2	Domain local group	*None*
Computer1	Computer	Group1
Computer2	Computer	Group1

Computer1 contains the shared folders shown in the following table.

Name	NTFS permission	Share permission	Folder enumeration mode
Share1	Group1:Write	Group1: Full control	Access-based
Share2$	Group2: Full control	Group2: Read	Unrestricted

The computers have the network configurations shown in the following table.

Name	Network Discovery	Windows Defender Firewall
Computer1	On	Incoming connections: Block all connections to apps that are not on the list of allowed apps
Computer2	Off	Incoming connections: Block all connections to apps that are not on the list of allowed apps

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
Share1 is listed if User1 connects to \\Computer1 from Computer2.	○	○
Share1 is listed if User2 connects to \\Computer1 from Computer2.	○	○
Share2$ is listed if User2 connects to \\Computer1 from Computer2.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
User1 is in Group1 which has permission to access the share so the share will be visible. Box 2: No
User2 is in Group2 which does not have permission to access Share1. Access-based enumeration is enabled so Share1 will not be listed as User2 does not have permission to access it.

Box 3: No
Share2$ is a hidden share (dollar sign appended) so the share will never be listed.

Computer1 contains the folders shown in the following table.

Name	Path	Permission	Share permission
Folder1	D:\Folder1	Administrators: Full control Group1: Read	Group1: Full control
Folder2	E:\Folder2	Administrators: Full control	None

You move Folder1 into Folder2.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can connect to Folder1 by using a path of \\Computer1\Folder1 UNC.	○	○
User1 can read the content in E:\Folder2\Folder1 when the user signs in to Computer1.	○	○
User2 can connect to Folder1 by using a path of \\Computer1\E$\Folder2\Folder1 UNC.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: No
If you move a shared folder, the share will no longer work.
Box 2: No
Folder1 will inherit the permissions of Folder2. User1 does not have permission to access Folder2. Box 3: Yes
User2 is a member of the Administrators group so he can access the administrative share \\Computer1\E$. User2 has Full Control permission to Folder2 so he can access \\Computer1\E$\Folder2.
Folder1 will inherit the permissions of Folder2 so User2 can access \\Computer1\E$\Folder2\Folder1.

NEW QUESTION 311
- (Exam Topic 4)
You have a computer named Computer1 that runs Windows 10. Computer1 has a folder named C:\Folder1.
You need to meet the following requirements:

➢ Log users that access C:\Folder1.

➢ Log users that modify and delete files in C:\Folder1. Which two actions should you perform?

A. From the properties of C:\Folder1, configure the Auditing settings.
B. From the properties of C:\Folder1, select the Encryption contents to secure data option.
C. From the Audit Policy in the local Group Policy, configure Audit directory service access.
D. From the Audit Policy in the local Group Policy, you configure Audit object access.
E. From the Audit Policy in the local Group Policy, you configure Audit system events.

Answer: AD

Explanation:
Files and folders are objects and are audited through object access. Reference:

NEW QUESTION 327
- (Exam Topic 4)
Your network contains an Active Directory domain. The domain contains a group named Group1.
All the computers in the domain run Windows 10. Each computer contains a folder named C:\Documents that has the default NTFS permissions set.
You add a folder named C:\Documents\Templates to each computer.
- You need to configure the NTFS permissions to meet the following requirements: All domain users must be able to open the files in the Templates folder.
- Only the members of Group1 must be allowed to edit the files in the Templates folder.
How should you configure the NTFS settings on the Templates folder? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Inheritance:
- Enable inheritance.
- Disable inheritance and remove permissions.
- Disable inheritance and copy explicit permissions.

NEW QUESTION 333
- (Exam Topic 4)
Your company is not connected to the internet. The company purchases several new computers with Windows 10 Pro for its users.
None of the new computers are activated.
You need to activate the computers without connecting the network to the Internet.
What should you do?

A. Make use of the Volume Activation Management Tool (VAMT).
B. Make use of the Key Management Service (KMS).
C. Make use of the Windows Process Activation Service.
D. Run the Get-WmiObject -query cmdlet.

Answer: B

Explanation:
You can configure one of the computers as a Key Management Service (KMS) host and activate the KMS host by phone. The other computers in the isolated network can then activate using the KMS host.
Installing a KMS host key on a computer running Windows 10 allows you to activate other computers running Windows 10 against this KMS host and earlier versions of the client operating system, such as Windows 8.1 or Windows 7. Clients locate the KMS server by using resource records in DNS, so some configuration of DNS may be required. This scenario can be beneficial if your organization uses volume activation for clients and MAK-based activation for a smaller number of servers. To enable KMS functionality, a KMS key is installed on a KMS host; then, the host is activated over the Internet or by phone using Microsoft's activation services.
