

## Exam Questions NSE6\_FNC-7.2

Fortinet NSE 6 - FortiNAC 7.2

[https://www.2passeasy.com/dumps/NSE6\\_FNC-7.2/](https://www.2passeasy.com/dumps/NSE6_FNC-7.2/)

#### NEW QUESTION 1

Where do you look to determine when and why the FortiNAC made an automated network access change?

- A. The Event view
- B. The Port Changes view
- C. The Connections view
- D. The Admin Auditing view

**Answer: B**

#### Explanation:

Reference: <https://docs.fortinet.com/document/fortigate/6.2.3/cookbook/536166/viewing-event-logs>

Study Guide p. 356: Any time FortiNAC changes network access for an endpoint, the change is documented on the Port Changes view. This provides an administrator with valuable information when validating control configurations and enforcement.

#### NEW QUESTION 2

Which two policy types can be created on a FortiNAC Control Manager? (Choose two.)

- A. Authentication
- B. Network Access
- C. Endpoint Compliance
- D. Supplicant EasvConnect

**Answer: AB**

#### Explanation:

Network Access policies as a common type of policy in FortiNAC, used to dynamically provision access to connecting endpoints. While Authentication is typically a policy type in network access control systems like FortiNAC

#### NEW QUESTION 3

Which three of the following are components of a security rule? (Choose three.)

- A. Security String
- B. Methods
- C. Action
- D. User or host profile
- E. Trigger

**Answer: CDE**

#### Explanation:

Reference: <https://docs.fortinet.com/document/fortinac/8.8.0/administration-guide/167668/add-or-modify-a-rule>

#### NEW QUESTION 4

View the command and output shown in the exhibit.

```
>Client -mac *C4:4E:12
Found 1 matches for client
Intel Corporation
    DBID = 606
    MAC = 00:03:47:C4:4E:12
    IP = null
    Medium = null
    Description = null
    Status = Connected
    State = Initial
    Type = DynamicClient
    Ident = null
    UserID = null
    ParentID = 576
    Role = NAC-Default
    Security Access Value = null
    OS = null
    Location = Building 1 Switch SuperStack II Switch 3900-2
    Client Not Authenticated = false
    Client needs to authenticate = false
    Logged On = false
    At-Risk = false
    Host role = NAC-Default
    VpnClient = false
```

What is the current state of this host?

- A. Rogue
- B. Registered
- C. Not authenticated
- D. At-Risk

**Answer: A**

#### Explanation:

The exhibit's command and output detail various attributes for a specific host, including the MAC address, connection status, and various other parameters. The status "Connected" and state "Initial" indicate that the host has been detected on the network but has not yet completed any authentication process. The lines "Client Not Authenticated = true" and "Client needs to authenticate = false" suggest that the host has not yet been authenticated. Therefore, the current state of the host is "Not authenticated," since there is a clear indication that the authentication process has not been completed for this host.

#### NEW QUESTION 5

Which command line shell and scripting language does FortiNAC use for WinRM?

- A. Linux
- B. Bash
- C. DOS
- D. Powershell

**Answer:** D

#### Explanation:

Open Windows PowerShell or a command prompt. Run the following command to determine if you already have WinRM over HTTPS configured.

Reference: <https://docs.fortinet.com/document/fortinac/8.7.0/administration-guide/246310/winrm-device-profile-requirements-and-setup>

Admin Guide on p. 362, "Matches if the device successfully responds to a WinRM client session request. User name and password credentials are required. If there are multiple credentials, each set of credentials will be attempted to find a potential match. The commands are used to automate interaction with the device. Each command is run via Powershell."

#### NEW QUESTION 6

Where do you look to determine which network access policy, if any is being applied to a particular host?

- A. The Policy Details view for the host
- B. The Connections view
- C. The Port Properties view of the hosts port
- D. The Policy Logs view

**Answer:** A

#### Explanation:

To determine which network access policy is applied to a particular host, you should look at the Policy Details window. This window provides information about the types of policies applied (such as Network Access, Authentication, Supplicant, etc.), including the profile name, policy name, configuration name, and any settings that make up the configuration.

FortiNAC p 382: "Under Network Access Settings - Policy Name - Name of the Network Access Policy that currently applies to the host."

#### NEW QUESTION 7

Two FortiNAC devices have been configured in an HA configuration. After five failed heartbeats between the primary device and secondary device, the primary device fail to ping the designated gateway. What happens next?

- A. The primary device continues to operate as the in-control device and changes the status of secondary device to contact lost.
- B. The primary device changes its designation to secondary, and the secondary device changes to primary.
- C. The primary device shuts down NAC processes and changes to a management down status.
- D. The primary device waits 3 minutes and attempts to re-establish the HA heartbeat before attempting a second ping of the gateway.

**Answer:** C

#### NEW QUESTION 8

During the on-boarding process through the captive portal, what are two reasons why a host that successfully registered would remain stuck in the Registration VLAN? (Choose two.)

- A. The wrong agent is installed.
- B. The port default VLAN is the same as the Registration VLAN.
- C. Bridging is enabled on the host.
- D. There is another unregistered host on the same port.

**Answer:** BD

#### NEW QUESTION 9

Refer to the exhibit.

If a host is connected to a port in the Building 1 First Floor Ports group, what must also be true to match this user/host profile?

- A. The host must have a role value of contractor, an installed persistent agent or a security access value of contractor, and be connected between 6 AM and 5 PM.
- B. The host must have a role value of contractor or an installed persistent agent, a security access value of contractor, and be connected between 9 AM and 5 PM.
- C. The host must have a role value of contractor or an installed persistent agent and a security access value of contractor, and be connected between 6 AM and 5 PM.
- D. The host must have a role value of contractor or an installed persistent agent or a security access value of contractor, and be connected between 6 AM and 5 PM.

**Answer: D**

**Explanation:**

Looking at the provided exhibit which shows the Modify User/Host Profile window, the following must be true for a host to match the user/host profile:

? The host must be connected to a port within the "Building 1 First Floor Ports" group.

? The host must fulfill at least one of the following attributes:

? The host must be connected between the specified times of 6 AM and 5 PM on any day of the week.

The profile specifies that the host can match the profile by having any one of the listed attributes (Role as Contractor, Persistent Agent installed with specific security & access value), and the time condition must also be met. Therefore, the correct answer is D, which includes "or" conditions for the role value and persistent agent and specifies the correct time frame.

**NEW QUESTION 10**

How does FortiGate update FortiNAC about VPN session information?

- A. API calls to FortiNAC
- B. Syslog messages
- C. SNMP traps
- D. Security Fabric Integration

**Answer: B**

**NEW QUESTION 10**

Which two agents can validate endpoint compliance transparently to the end user? (Choose two.)

- A. Dissolvable
- B. Mobile
- C. Passive
- D. Persistent

**Answer: AD**

**Explanation:**

Both dissolvable and persistent agents can be used to validate endpoint compliance transparently to the end user. The persistent agent stays resident on the endpoint and performs scheduled scans in the background. The dissolvable agent is a run- once agent that dissolves after reporting its results, leaving no footprint on the endpoint
