NEW QUESTION 7
- (Topic 3)
You have a Azure Virtual Desktop deployment.
In Azure Advisor, you discover the following recommendation related to Azure Virtual Desktop:
• Impact Medium
• Description: No validation environment enabled
• Potential Benefit Ensure business continuity through AVD service deployments
• Impacted Resource:1 Host Pool
What can you validate by implementing the recommendations?

A. Capacity requirements of the session hosts
B. Security settings of Azure Virtual Desktop
C. Preview features for Azure Virtual Desktop
D. Azure Site Recovery failover of the session hosts

Answer: D

Explanation:
Validation environments are used to test and validate Azure Virtual Desktop
deployments before they are made available to users. This can include testing the capacity of the session hosts, the performance of the deployment, and the configuration of security settings. By implementing a validation environment, you can ensure that the Azure Virtual Desktop deployment is working correctly and that there are no issues that could impact business continuity. This can help to ensure a smooth user experience and minimize downtime.

NEW QUESTION 10
- (Topic 3)
You have an on-premises network and an Azure subscription. The subscription contains the following virtual network:
* Name: VNet1
* Address space: 10.10.0.0/16
* Subnet name: Subnet1
* Subnet1 address range: 10.10.0.0/16
You deploy an Azure Virtual Desktop host pool that contains 10 session hosts to Subnets1. You plan to deploy a VPN gateway to VNet1 and provide the session hosts with access to
the on-premises network.
You need to ensure that you can deploy the VPN gateway. What should you do first?

A. Modify the address range of Subnet1. Most Voted
B. Add a subnet named GatewaySubnet to VNet1.
C. Modify the address space of VNet1. Most Voted
D. Associate a network security group (NSG) to Subnet1.

Answer: B

Explanation:
In order to deploy a VPN gateway to VNet1, you should first add a subnet named GatewaySubnet to VNet1. According to the Microsoft Official Guide AZ-140, "You must create a gateway subnet for the virtual network that you plan to use for the gateway. The subnet must be named GatewaySubnet and it must use an address range that is large enough to accommodate the number of IP addresses that you plan to use for the gateway and its supporting resources." Therefore, the first step to ensure that you can deploy the VPN gateway is to add a subnet named GatewaySubnet to VNet1.
